HOW TO USE “GABA RICE (BROWN RICE)”

What is Germinated Brown rice?

► Brown rice has richer nutrients than polished rice. However, brown rice is rather tough and hard to be digested. By germination, the enzymes in the brown rice are activated, generating nutrients, and are easier to digest.

Features of Germinated Brown Rice

Germinated brown rice increases nutrients and enhances taste, which is a weak point of brown rice. Germinated brown rice also improves digestion.

► Taste will be greatly enhanced.
► Easier to digest and is rich in nutrients.
► Diabetic hormone is generated improving digestion.
► Good as a health food for children or adults.
► Rich with dietary fiber.
► Germinated brown rice has rich GABA (Gamma Aminobutyric Acid)
   - GABA promotes metabolism in liver and kidneys, suppresses neutral fat, lowers blood pressure, promotes metabolism in brain cells - these effects have been proven by medical science.

Using “GABA” Menu

1 In order to promote germination, soak brown rice for 16 hours in water.
   Method of Pre-germination
   ► Put washed brown rice in an appropriate container, pour sufficient amount of water to soak the rice.
   ► Pre-germination shall not exceed 16 hours. Make sure to rinse the rice clean with flowing water before using “GABA” menu. Be careful not to rinse too much or else the embryos that are required to germinate may wear off.
   ► Unique smell may be generated according to the soaking time of pre-germination
   ► When pre-germination has been completed, wash the rice and insert the inner pot. Pour appropriate amount of water and use “GABA” menu.
   ► During summer or hot temperature environment, an odor may be generated. Reduce germination time and wash clean when cooking.

2 Set the Lock/Unlock handle at Lock, press Menu button to select “GABA”
   ► When cooking brown rice with or without germination, select “Brown Rice” option and start cooking.

3 Press Pressure Cook/Glutin. Turbo button.
   ► If you press the Pressure Cook/Glutin Turbo button, the brown rice will start to germinate for the set time and cooking will start after germination is complete.
   ► When germinating the brown rice, remaining time will be displayed.

When the “GABA” is selected, “3H” is indicated in the display

1 If smaller germ is preferred, omit pre-germination process. Select “GABA” menu, set-up appropriate germination time, and start cooking (nutrients ingredients do not vary significantly by the size of germ).
2 During hot seasons, longer germination time may generate odor. Reduce germination time.
3 GABA cooking feeds up to 2.5 people.
4 City water can be used for germination. However, filtered or drinkable water is recommended. Germination may not be properly performed in hot or boiled water even after cooking.
5 Germination rate and germ growth may differ by the type of brown rice, condition, or period of storing.
   - The brown rice should be within 1 year from harvest, and not long since pounded.
6 In GABA mode, preset on 3H may not be possible. If you want to preset the GABA, set up BROWN RICE menu. (See the page 21)
7 The taste of rice could be different depending on a kind of brown rice. Use customized taste function or control the amount of water for your taste. (Refer to page 19)
8 Depending on the user’s environment or the condition of the rice, the sprout may not be visible.

   - If there is an excessive amount of cooked rice in the pot, it may not sufficiently be reheated.
   - It is recommended to set reheating for no more than 1.5 people. (approx. half of the inner pot)
   - Reheating of cold- or frozen-stored cooked rice may cause insufficient heating, dehumidifying or melanosis (slightly burnt) after completion of reheating.

   - Reheating of frozen-stored cooked rice shall be performed only after thawing the rice.

2. Changing preset time.

   - After matching the standard points 1 to 6, press the rest of the packing into the groove by pushing on its outer rim.
How to double check whether the packing is well assembled

Since a badly assembled packing can cause the rice to be half-cooked or burned by steam leakage, double check the packing thoroughly as described below.

1. Visual inspection

- Normal assembly
- Abnormal assembly

| (look for parts sticking out of the inner) | (look for parts sticking out of outer rim) | (look for parts sticking out of damaged parts) |

2. Physical inspection

- Check if the pressure packing is thoroughly put into the groove by rubbing the inside rim of the packing with a finger around the entire circumference as shown in the picture above.
- Check if the pressure packing is properly put into the groove of the Inner Pot lid by pushing the outer rim with a finger around the entire circumference as shown in the picture.
- Check if the pressure packing is thoroughly put into the groove by pushing the inside of the rim packing with a finger around the entire circumference as shown in the picture.

3. Water boiling test

- Pour water in the Inner Pot up to water level 2 (for “Rice”) and press the Menu/Selection button to select the self-cleaning mode.
- Then push the Pressure Cook/Turbo button.
- Within 10 minutes, the pressure regulator weight will start rattling and hissing while emitting steam. If there is no steam coming out from the pot other than through the pressure regulator weight the packing has been properly installed.
- If steam comes out from other parts, stop the test and pull out the power cord. Wait until the pot cools down before removing the pressure packing from the lid. Once reinstalled repeat the boiling test.
- For a more precise water boiling test, you can wrap plastic around the circumference of the closed Top Cover. By doing so, you can easily check where the steam leakage is.
